1. (10 points) For each of the following statements, mark **T** if the statement is true and **F** if the statement is false. No justification is required for each answer.

(a) _____ The linear systems

$$\begin{array}{ccc} x_1 + x_2 = 2 & & x_1 + x_2 = 2 \\ x_2 = 0 & \text{and} & 0 = 0 \end{array}$$

have the same solution set.

(b) _____ Let A be an $m \times n$ matrix and $\mathbf{u}, \mathbf{v}$ in $\mathbb{R}^n$ such that $A\mathbf{u} = A\mathbf{v} = \mathbf{0}$. Then $A(2\mathbf{u} + \mathbf{v}) = \mathbf{0}$.

(c) _____ Let $\mathbf{u}, \mathbf{v}, \mathbf{w}$ be vectors in $\mathbb{R}^3$. Suppose $\{\mathbf{u}, \mathbf{v}\}$ is linearly independent and $\{\mathbf{u}, \mathbf{v}, \mathbf{w}\}$ is linearly dependent. Then $\text{Span}\{\mathbf{u}, \mathbf{v}, \mathbf{w}\} = \text{Span}\{\mathbf{u}, \mathbf{v}\}$.

(d) _____ Suppose A is an $m \times n$ matrix whose columns span $\mathbb{R}^m$. Then $A\mathbf{x} = \mathbf{b}$ has a *unique* solution for all $\mathbf{b}$ in $\mathbb{R}^n$.

(e) _____ The linear transformation $T : \mathbb{R}^2 \to \mathbb{R}$ defined by $T(x_1, x_2) = x_1 - x_2$ is one-to-one.

2. (20 points) Apply elementary row operations to transform the following matrix into reduced echelon form:

$$\begin{bmatrix} 1 & -1 & 2 & -1 \\ -1 & 1 & -1 & 0 \\ 2 & -2 & 10 & -3 \end{bmatrix}.$$

Show your work. (You do *not* need to state the row operation, but your steps should be clear.)

[Additional work for question 2.]

3. (16 points) Determine if the linear system

$$
\begin{aligned}
x_1 - 2x_2 \quad\;\; &= 1 \\
x_1 - \;\; x_2 - x_3 &= 3 \\
3x_1 - 7x_2 - x_3 &= 3
\end{aligned}
$$

is consistent. Justify your answer.

[Additional work for question 3.]

4. (12 points) Let

$$A = \begin{bmatrix} 1 & 1 & 0 \\ 2 & 2 & 1 \\ 1 & 1 & -1 \end{bmatrix} \quad \text{and} \quad U = \begin{bmatrix} 1 & 1 & 0 \\ 0 & 0 & 1 \\ 0 & 0 & 0 \end{bmatrix}.$$

You may assume $A \sim U$. That is, A and U are row equivalent.

(a) What are the pivot positions of A?

(b) Does $A\mathbf{x} = \mathbf{b}$ have a solution for each $\mathbf{b}$? Justify your answer.

(c) Does $A\mathbf{x} = \mathbf{0}$ have a nontrivial solution? Justify your answer.

[Additional work for question 4.]

5. (15 points) Let

$$\mathbf{v}_1 = \begin{bmatrix} 1 \\ 1 \\ 2 \end{bmatrix}, \quad \mathbf{v}_2 = \begin{bmatrix} 1 \\ -1 \\ -4 \end{bmatrix}, \quad \text{and} \quad \mathbf{v}_3 = \begin{bmatrix} 1 \\ 0 \\ -1 \end{bmatrix}.$$

(a) Is $\{\mathbf{v}_1, \mathbf{v}_2\}$ linearly independent? Justify your answer.

(b) Is $\{\mathbf{v}_1, \mathbf{v}_2, \mathbf{v}_3\}$ linearly independent? Justify your answer. (*Hint:* choose weights $x_1 = 1$, $x_2 = 1$ and $x_3 = -2$.)

(c) Is

$$\mathbf{b} = \begin{bmatrix} -2 \\ 12 \\ 38 \end{bmatrix}$$

in Span$\{\mathbf{v}_1, \mathbf{v}_2\}$? If yes, write $\mathbf{b}$ as a linear combination of $\mathbf{v}_1$ and $\mathbf{v}_2$. Show your work.

[Additional work for question 5.]

6. (15 points) Let

$$A = \begin{bmatrix} 1 & 3 & -1 \\ -3 & -9 & 3 \\ 2 & 6 & -2 \end{bmatrix}.$$

(a) Solve $A\mathbf{x} = \mathbf{0}$ and express the solution in parametric vector form.

(b) Let $\mathbf{p} = (-1, 1, 0)$. Suppose $\mathbf{b} = A\mathbf{p}$. Calculate the value of $\mathbf{b}$.

(c) Suppose $\mathbf{b}$ is the same as in part (b). Based on the results from parts (a) and (b), write the general solution to $A\mathbf{x} = \mathbf{b}$ in parametric vector form.

[Additional work for question 6.]

7. (12 points) Let

$$\mathbf{u}_1 = \begin{bmatrix} 1 \\ -2 \end{bmatrix} \quad \text{and} \quad \mathbf{u}_2 = \begin{bmatrix} 0 \\ 2 \end{bmatrix}.$$

(a) Write $\mathbf{e}_1 = \begin{bmatrix} 1 \\ 0 \end{bmatrix}$ and $\mathbf{e}_2 = \begin{bmatrix} 0 \\ 1 \end{bmatrix}$ as linear combinations of $\mathbf{u}_1$ and $\mathbf{u}_2$ (*Hint:* it should be possible to do this without solving a linear system).

(b) Suppose that $T : \mathbb{R}^2 \to \mathbb{R}^3$ is a linear transformation and $T(\mathbf{u}_1) = (-3, -2, 0)$ and $T(\mathbf{u}_2) = (4, 2, 0)$. Determine the values of $T(\mathbf{e}_1)$ and $T(\mathbf{e}_2)$.

(c) Write the standard matrix for the transformation T.

(d) Does T map $\mathbb{R}^2$ onto $\mathbb{R}^3$? Justify your answer.

[Additional work for question 7.]
